

Crackle Effects Specification Details.

Description

This is an acrylic paint like finish created from a textured base coat applied over a special cracking agent then finished with a washed top coat. These finishes require special skills and experienced application to achieve good high quality end results. Applications and products are provided directly from Walleffects Ltd. Crackle Effects offer much more depth and texture than other traditional crackle finishes.

Site Name

[Add you site location here]

Areas to receive specialist finishes

[Add description here of all areas to be finished]

Drawings

[Add drawing reference number etc]

Substrate

[Add your preferred substrate here with a reference to the relevant data sheet.]

Render, drylined surfaces, plaster board or previously decorated surfaces are all suitable. Substrates all need to be fully dry, free from dust, dirt, oil, salts, moisture, straight, plumb and with no bumps or ridges.

Please check our **paints substrate documents** for more details or email our technical adviser tech@walleffects.co.uk.

Finish

[Add finish here]
As per sample ref

Colour

[Add number or name here taken from sample]

Crackle finishes are custom finishes and we recommend picking from a sample for this style.

Walleffects finishes are not a uniform colour and will have natural shade variations.

Small samples may not show this.

Thickness

0.5 to 1mm or per textured sample.

Programme

Application times will vary depending on the specific project. Finishes need to be applied late in the construction normally when decorating is taking place. Applications are normally booked 8 weeks in advance. The Crackle Effects has a minimum 2 days application time due to the various required layers. Please contact Walleffects for specific application times.
